

Primary User Roles

Manual

AgriERP User Roles and Permissions

Overview

AgriERP defines a structured hierarchy of **five** primary user roles to manage farm operations efficiently. These roles include **Manager, Supervisor, Responsible Person, Team Lead, Machine Operator, and Farm Hand**. Each role is designed with specific permissions and responsibilities to ensure seamless workflow and accountability.

AgriERP provides a structured hierarchy of user roles to ensure efficient farm operations management. Each role has specific permissions and actions that align with their responsibilities. Below is a breakdown of the key roles and their capabilities.

1. Manager (Web & Mobile Access)

Role Type: Administrative

Permissions & Actions:

- Access both web and mobile applications.
- Create and manage work orders.
- Review and approve/reject user attendance (if attendance is enabled)
- Adjust user attendance and break hours (if attendance and break hours is enabled)
- Assign responsible persons to work orders.
- Create material and inspection templates.
- Modify farm planning details (crop, resources, material updates).
- Generate and manage harvest work orders (if harvesting is enabled)
- Assign and review machine operators and field hands.
- Approve adjustments in field progress reports.
- Manage role-based user permissions and access control.
- Create and modify attributes.
- Toggle the responsible person designation (only one responsible person per work order at a time).
- Retain edit rights on progress in the Farm App.

2. Supervisor (Mobile Access)

Role Type: Field Leadership

Permissions & Actions:

- Use the mobile app for work order management.
 - Start and end work orders for themselves and other users.
 - Clock in/out other users (if attendance is enabled)
 - Assign and adjust machine operators and farmhands.
 - Review and update field progress reports.
 - Generate and assign harvest tickets (if harvesting is enabled)
 - Approve or modify task completions.
 - Act as a liaison between field workers and the office team.
 - Switch or select other users or machines from mobile.
 - Adjust and modify users' progress.
 - Be part of multiple active work orders/jobs simultaneously.
 - Remove and assign a new responsible person.
-

3. Responsible Person (Mobile Access)

Role Type: Field Coordinator

Permissions & Actions:

- Single designated person per work order.
- Enter progress updates and task completions.
- Clock in/out assigned resources (if attendance is enabled)
- Add or remove team members or machinery from work orders.
- Modify and manage progress for ongoing tasks.
- Can start a work order even if they are not clocked in.
- Maintain task accountability for work order completion.
- Can clock in/out resources assigned to a work order.
- Can remove and add new resources or machines into work orders.
- Can add/remove team leads.

4. Machine Operator / Farm Hand (Mobile Access)

Role Type: Field Worker

Permissions & Actions:

- Clock in/out for daily attendance.
 - Start assigned jobs and tasks.
 - Add progress updates to assigned tasks.
 - Record material consumption for assigned work orders.
 - Pause and resume jobs.
 - Mark daily progress and task completion.
 - Communicate with field staff and management using the chat feature.
 - Create observations and points of interest within farm operations.
-

Conclusion

AgriERP ensures role-based access control, allowing users to perform only the necessary tasks within their designated scope. Managers retain administrative control, supervisors oversee field operations, responsible persons ensure task execution, and machine operators/farm hands handle the core execution of tasks.

This structured approach enhances efficiency, accountability, and streamlined farm management within AgriERP.
