Revision History

Date	Released By	Version	Section Link
12-Feb-26	Junaid Mahmood	1.0	Initial Release
16-Mar-26	Junaid Mahmood	1.1	Updates: v1.1
27-Mar-26	Junaid Mahmood	1.2	Updates: v.1.2

Executive Summary

AgriWMS (for Hullers) is an integrated Warehouse Management System designed specifically for agricultural hullers. It digitizes the entire post-harvest process from receiving from growers and scale weighing to stockpile management, fumigation tracking, inventory movement within the plant, and outbound shipments to handlers.

This solution includes the following two applications:

- ***Web Application (Huller)*** *— Shipment Team, Receiving team and Warehouse Ops Team.*

- ***Mobile & Tablet Application (Huller Yard Supervisor)*** *- field, warehouse operators, and stockpile workers*

The goal is to improve **traceability, accuracy, compliance, and operational efficiency** through automation, real-time sync, and ERP integration.

This document defines functional behavior, workflows, system boundaries, and integration expectations for development

Problem Statement

Traditional huller operations rely on **paper tickets, manual logs, and isolated systems**, resulting in:

- Frequent **data entry errors** and **duplicate records**.
- Lack of **traceability** from receiving to shipment.
- **Operational delays** between field intake, weighing, and outbound shipment.

These issues lead to significant downtime, yield loss, and reduced grower confidence.

Solution Overview

AgriWMS provides an **end-to-end digital solution** for managing huller operations:

- Seamlessly **integrates hardware** (scales, scanners, printers) with digital workflows.
- Enables Mobile / Tablet **field validation and stockpile management.**
- **Offers traceability** from field ticket → huller intake → processing → shipment.
- Provides **live dashboards, logs, and reporting**.

- Synchronizes data with **AgriERP** for centralized grower and shipment records for handlers (WMS App for handler).

The following items are part of this document's scope:

- Digital warehouse management for nuts (almonds etc.), and similar commodities
- Receiving and intake of raw field-run produce (almonds) from growers
- Management of drivers, trucks, and trailers as part of inbound and outbound warehouse operations, including the tare weights.
- Movement tracking across warehouses and locations such as stockpiles, tanks & staging locations
- Shipment by bin tracking and container loading via scanning
- Role-based user system for front office, warehouse operation and field teams
- Real-time reporting
    - Reporting for growers and handlers' visibility of their inventory
- ERP synchronization to update the inventory at the time of receiving, shipment, and inventory movements within the facility.
- Tank management must be available in the WMS Mobile / Tablet app, allowing users to update tank statuses (Full, Empty, Closed). All status changes must be synchronized to the production app, capturing the user name and timestamp of the person performing the activity.

The following items are **not** part of this document's scope:

- Financial accounting or grower payment processing
- External logistics carrier booking
- IoT automation (Future roadmap)

Summary

AgriWMS (Processor) is a warehouse management application designed exclusively for processors, integrating with grower and handler systems as a component of broader operational and logistics workflows.

Core functionality includes:

- Digital **field ticket capture** and grower validation.
- **Scale integration** for accurate weight.
- Recommends **stockpiles for incoming field run almonds**.
- **Inventory control** across stages (Field Runs, processed - Pre-Cleaned, Inshells, Kernels, Rejects).
- **Shipment** with full truck lifecycle.
- Batch inventory reporting for growers and handlers to plan their future activities.

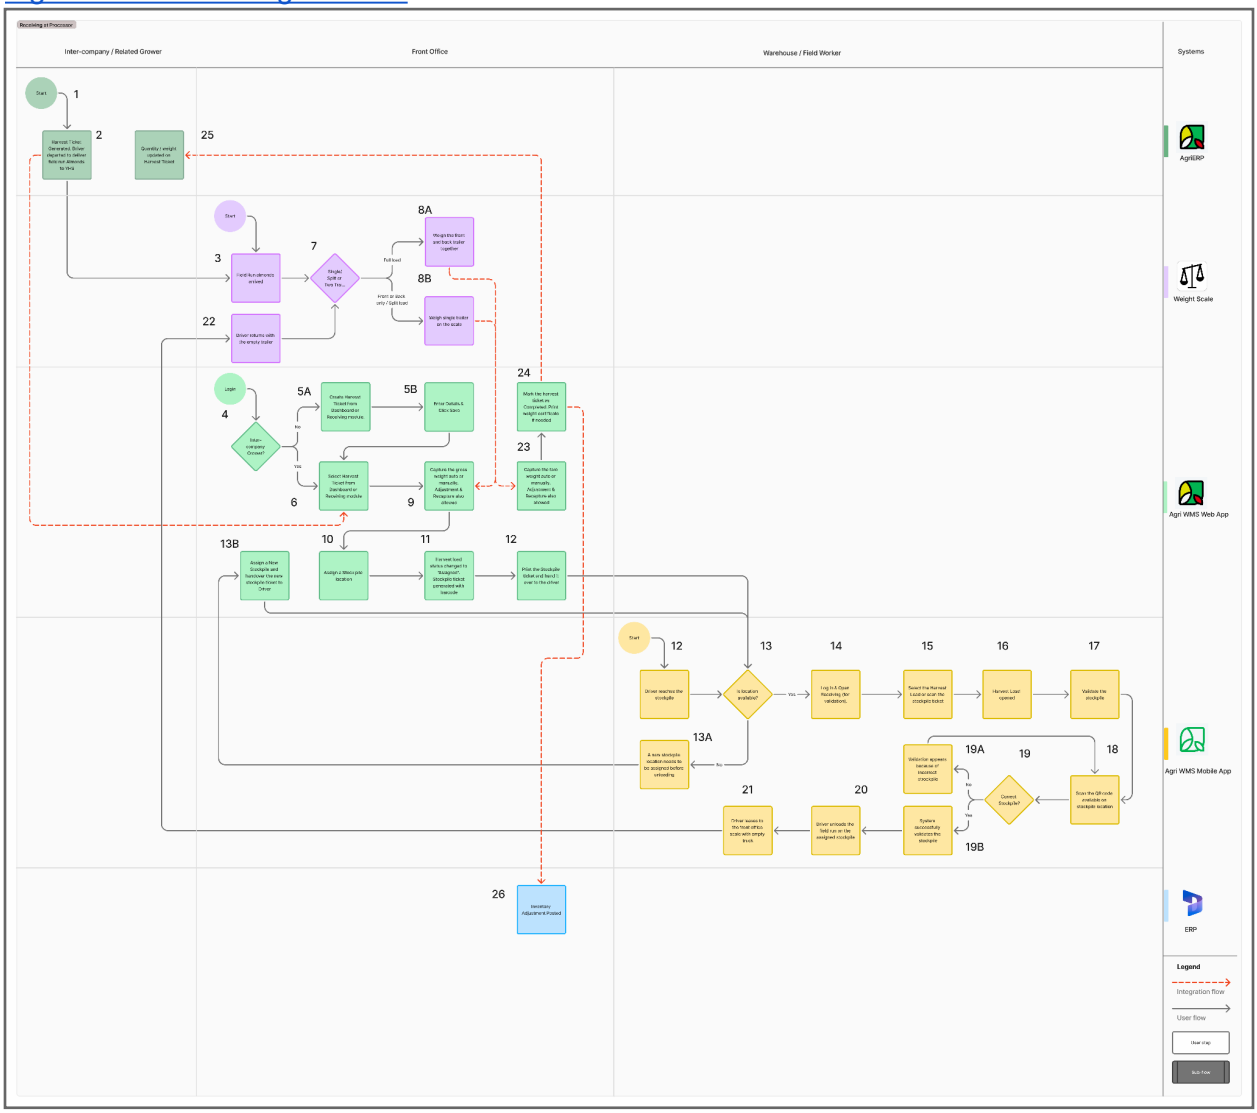

- Billing info for growers will also populate from the shipment quantities.

- Inventory onhand by the “as of date” report view.
- Blocking/Lock of inventory movement between locations.
- Track shipment by bin and container quantities.
- ~~**Offline support** for field operators with delayed sync.~~

Workflows

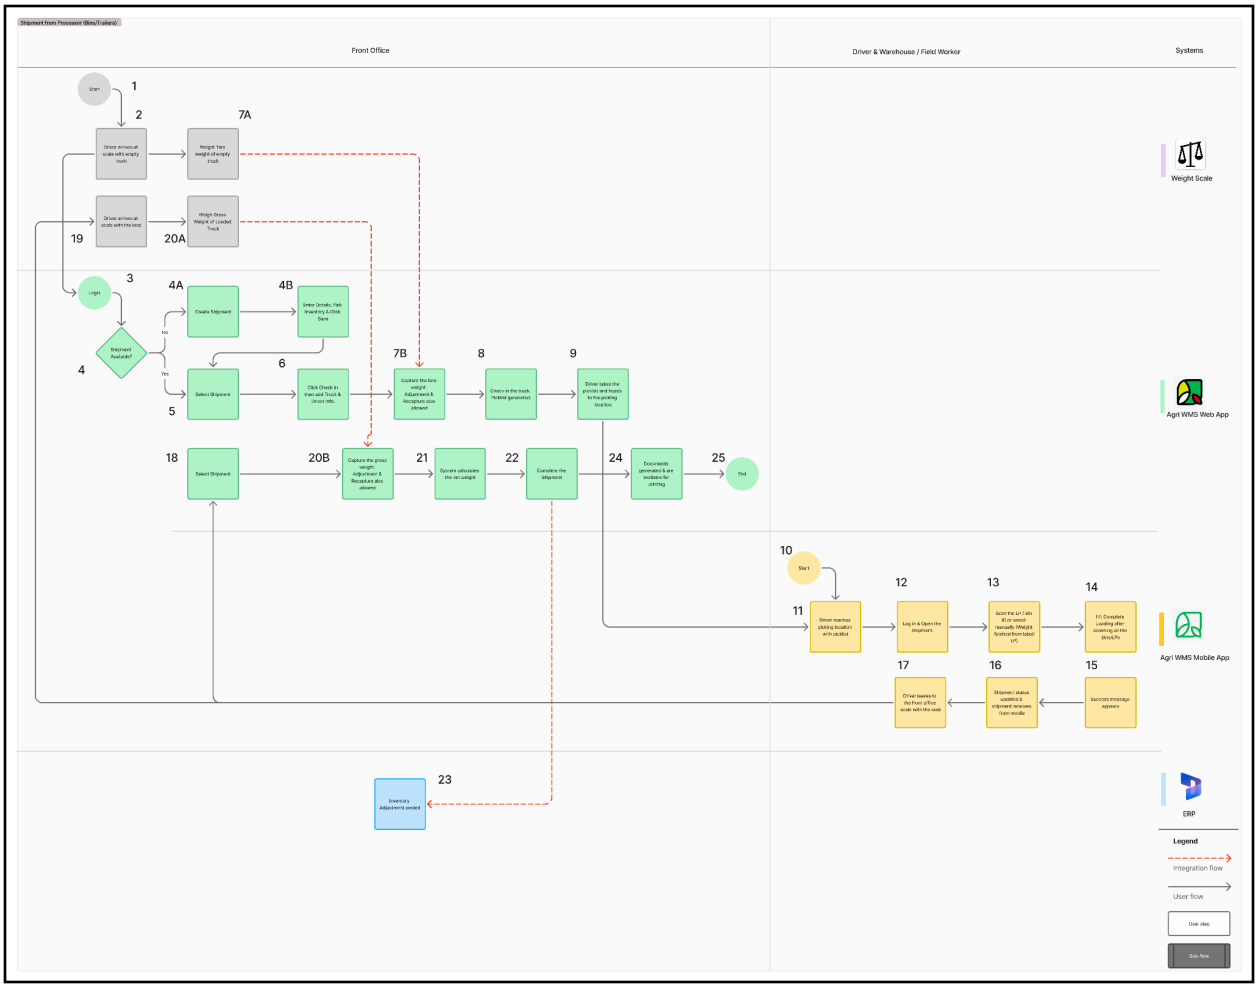

Receiving

Shipment

Shipment Trailer/Bins

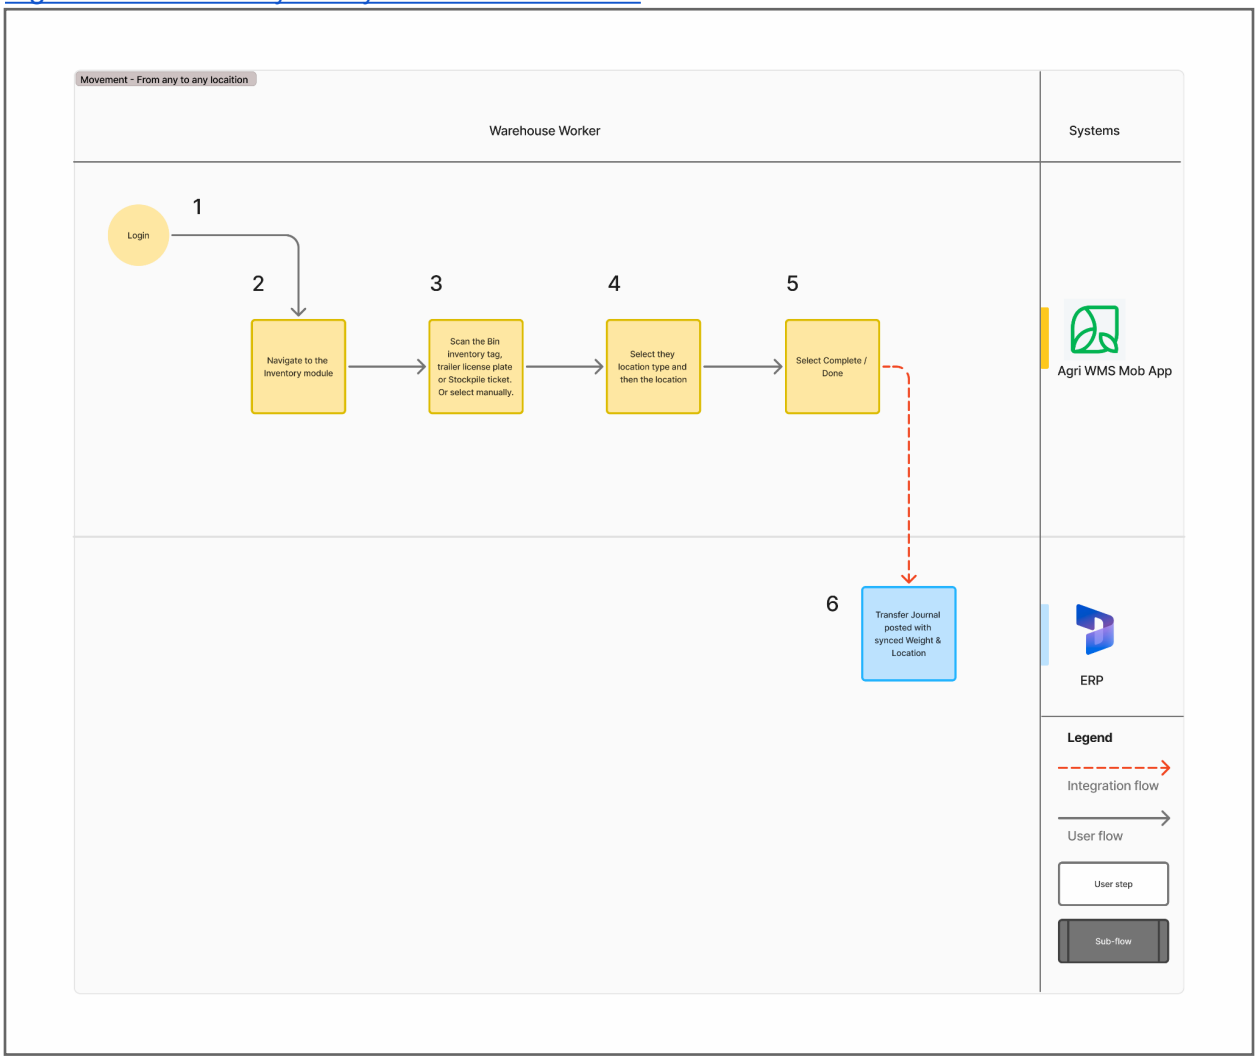

Inventory Transfer - Stockpile to Staging

[Figma Link: Inventory transfer from stockpile to staging]

Bins Transfer - From any to any Location

[Figma Link: From any to any Location Movement]

UI & UX (Wireframes & Designs etc.)

Prototype Application links:

1. AgriWMS Web App
2. AgriWMS Mob App

Final Design link - WMS Web: [Yet to be inserted]

Final Design link - WMS Mobile & Tablet: [Yet to be inserted]

UI & UX features:

1. Column options (hide, show columns) on tables/grids. Users will be able to add & hide columns and save it as their preference (refer prototype)
2. Sorting of the columns on tables and ability to save it as preference on user level (refer prototype)
3. Two views of the tables i.e. table view and card view (refer prototype)
4. Drop down list view of growers, handlers, product type, variety, farming type (organic and conventional) and locations etc.
5. Filters on tables / grids and filters on columns as well.

App Users

App Access	Roles	Description
AgriWMS Web App	Front Office	Responsible for managing inbound and outbound truck activities, including creating and managing field run receiving & shipments (both kernels & inshells), capturing tare and gross weights, and checking trucks in and out.
AgriWMS Mobile / Tablet App	Stockpile Workers	Responsible for executing the actual physical operations accurately and efficiently. This includes unloading loads to the stockpile when the field run trucks arrive at the stockpile and loading the trucks when shipment trucks arrive at the picking location.
AgriWMS Mobile / Tablet App	Warehouse Workers	Responsible for picking and placing of inventory bins/trailers to various locations within the warehouse.

Persona 1 | Front Desk Officer

Name: Sarah

Role: Front Desk Officer

Responsibilities

- Managing truck check ins & check outs.
- Assign stockpile to the inbound field run almonds.
- Create or select the Batch attribute details i.e. Grower, Variety, Field #, Handler and Crop year.
- Capture gross, tare, and net weight.
- Generate and print labels and documents

Challenges

- Manual data entry
- No real-time status of incoming and outgoing loads

Goals

- Have easy and automated processes that make her life easier. Less manual effort.
- Easy and real time visibility of the data, status and progress of the loads.

Front Desk Officer User Journey:

User:

1. Sarah: Front Desk Officer | Agri WMS Web Application

Receiving from Growers

Sarah | Front Desk Officer

1. Field run almonds from growers arrive at the scale (start of the front-office receiving flow).
2. Sarah logs in to the Agri WMS Web App.
3. She identifies if this is an intercompany grower?
    a. No → She creates Harvest Ticket from the dashboard/receiving module → Enter details & click Save.
    b. Yes → She selects Harvest Ticket (synced via AgriERP) from the dashboard/receiving module.
        i. *Integration with AgriERP: Harvest ticket synced from AgriERP for intercompany growers*
4. Decision: Single trailer or two trailers? (Single Trailer = Front / Back only, Spilt Load. Two Trailers = Full load).
    a. If two trailers: Weigh front and back trailers together in case of the same grower, field or variety in both trailers, If the field or variety is different, this will be a split delivery case, only one trailer will be weighed (separate ticket will be created for the other filed/variety). (*Integration with scale)*
    b. If single trailer: Weigh single trailer on the scale. (*Integration with scale)*
5. She captures gross weight. She can overwrite or recapture if she wants
6. The System automatically identifies stockpile recommendations based on grower, field, variety and crop year or any other available stockpile location (User can't assign stockpile containing load of another grower/field / variety.
7. Edit harvest ticket and reassign stockpile should be allowed before generating the weight certificate after capturing the tare weight, upon creation of weight certificate app should display a popup message stating that this action cannot be reversed.

8. The system updates the harvest ticket status and generates a stockpile ticket with barcode if the gross, tare and net weight is calculated.
9. She prints the stockpile ticket and hands it over to the driver.

---

19. The driver returns with the empty trailer to the facility. Empty trailer gets weighted
20. Sarah captures the tare weight
21. System calculates/derives net weight as applicable (Net = gross - tare). Adjustments or recaptures allowed.
22. She captures the tare weight.
23. Mark the harvest ticket as Completed.
    a. *Integration with ERP: The system posts the inventory adjustment in F&O via integration.*
    b. *Integration with AgriERP: The system updates the quantity in harvest ticket.*

Shipment to Handlers (Bins/Trailers)

Sarah | Front Desk Officer

1. The empty truck arrives at the scale.
2. Sarah logs in to the Agri WMS Web App.
3. Decision: “Shipment Available?”
    a. If No:
        i. Click Create Shipment
        ii. Enter customer name.
        iii. Grower and Product sections should not be shown on the shipment creation screen.
        iv. Carrier and Driver can be selected using a dedicated button on the Create Shipment screen.
        v. Click Save
        vi. Proceed to Select Shipment
    b. If Yes: proceed directly to Select Shipment
4. Planned shipments may exist without a truck check-in. Once a truck is checked in, the shipment becomes available on the Mobile / Tablet app.
5. System validation ensures bins/trailers assigned to this shipment cannot be used in any other shipment.
6. Driver takes the picklist and heads to the picking location (handoff to warehouse worker)

---

15. The driver arrives back at the front office with the load (bins or trailers).
16. Select Shipment again
17. Capture the gross weight
18. Adjustments and re-capture are allowed

19. System calculates the net weight
20. Complete the Shipment
21. Documents are generated and available for printing
22. If an error is identified in bin scanning or shipment processing, the system allows shipment correction alongwith status. Bins or trailers can be removed.
23. System/ERP integration: Inventory Adjustment Posted (triggered after shipment completion)

Persona 2 | Field Workers (Stockpile / Warehouse Workers)

Name: David

Role: Field Worker

Responsibilities

- Validate incoming harvest loads at assigned stockpiles.
- Ensure the correct load is placed in the correct stockpile or picking location.
- Ensure correct bins are loaded for outbound shipments.

Challenges

- Ensuring the right load is placed or picked.
- Relying on paper tickets.
- Working in outdoor conditions with limited time and high truck movement.
- Avoiding mistakes caused by unclear instructions or miscommunication.

Goals

- Have clear & simple instructions for what to load / unload or validate.
- Minimize manual checks and paperwork.

Field Workers User Journey:

User:

1. David: Stockpile Worker | AgriWMS Mobile / Tablet
2. Joel: Picking Warehouse Worker | Agri WMS Mobile / Tablet Application

Receiving from Growers

David | Field Worker (Stockpile worker)

9. The driver reaches the stockpile.
10. Decision: “Is stockpile location available?”

a. No → A new stockpile location will be assigned before unloading.
b. Yes → continue.

11. David logs in & opens the “Receiving / Field Validation module” on Agri WMS app.
12. He selects the Harvest Load manually or scans the stockpile ticket barcode.
13. Harvest Load opens. He views details and validates the stockpile.
14. The app opens the QR code scanner. He scans the QR code available at the assigned stockpile location.
15. Decision: “Correct stockpile?”
    a. No → Validation appears because of incorrect stockpile (correct and retry).
    b. Yes → continue.
16. The system successfully validates the stockpile.
17. The driver unloads the field run almonds on the assigned stockpile.
18. The driver leaves to the front office to check out the empty truck.

Shipment to Handlers

David | Field Worker (Stockpile worker)

8. The driver reaches the picking location with the picklist.
9. David log in to the Agri WMS Mobile / Tablet App and open the Shipment module.
10. He starts scanning the bin/trailers LP.
11. After scanning all required bins/trailers, he completes the loading.
12. A success message appears confirming completion.
13. The shipment status gets updated and the shipment gets removed from the Mobile / Tablet app list.
14. Driver leaves to the Front Office scale with the load (handoff back to Front Office for weighing/completion steps).

Inventory (Field run almonds) Transfer - Stockpile to Staging

David | Field Worker (Stockpile worker)

1. David logs in to the AgriWMS Mobile / Tablet app.
2. He navigates to the Movement module
3. Within the Field run Almonds tab, he scans the stockpile ticket or selects the load ticket manually.
4. He selects the staging / pre-cleaning location on the app.
5. He taps on Transfer button
6. He selects the locations and taps on Complete.
    a. *Integration with ERP: The system posts the inventory transfer journal in F&O via integration.*

Inventory (Bins) Transfer - Production to Staging

1. David logs in to the AgriWMS Mobile / Tablet app.
2. He navigates to the inventory module
3. He goes to the Kernels tab if he needs to transfer the kernels otherwise inshells if he wants to transfer inshells that are in the bin
4. He scans the bin or selects the bin manually.
5. He selects the staging / pre-shipment location on the app.
6. He taps on Transfer button
7. He selects the locations and taps on Complete.
    a. *Integration with ERP: The system posts the inventory transfer journal in F&SC via integration.*

Technical & Other Details

Data Source Guidelines

AgriWMS is part of a broader ecosystem of applications supporting grower, processor, and handler operations. From a business perspective, reference and operational master data created within any application must be consistently available across all relevant applications (AgriERP, AgriWMS, Agri Quality and Agri Production App). Users should not be required to recreate the same data in multiple systems.

How this is achieved is an architectural decision and may be implemented through a shared data source, synchronized databases, or other integration mechanisms. No design decisions should restrict the availability or flow of data between applications.

List of Master Data

1. Growers (Sync from Grower Portal to ERP and WH & QC App - FDD link pending) - Read Only
2. Handlers (Sync from Grower Portal to ERP and WH & QC App - FDD link pending) - Read Only
3. Fields - (Already in AgriERP or GrowerPortal need to sync to Apps) - Read only
4. Items - (Item basic data will sync from ERP to Apps - FDD Link) - Read Only
5. Variety (Item basic data will sync from Growers Portal to Apps - FDD Link) - Read Only
6. Locations - (Created in Apps and sync to ERP - FDD Link) - CRUD
7. Carriers (Only in Apps) - CRUD
8. Drivers (Only in Apps) - CRUD
9. Trucks (Only in Apps) - CRUD
10. Trailers (Only in Apps) - CRUD

Configurational Data

Please see the following sheet for reference:
AgriWMS (Processor) - Forms

1. Product Type
2. Farming Type
3. Variety

Key Modules & Features

This section contains two lists: a high-level overview of key modules and features, and a detailed breakdown of features and sub-features, ensuring both a broad scope and in-depth implementation guidance.

1. **High Level Modules & Features:**

Module	Platform	Description	Key Features & Details
Dashboard	Both	Overview of live KPIs	Overview of Receiving, Shipment & Inventory
Receiving	Both	Receive loads from grower and unload to stockpiles	Scale capture (integration), field ticket, weight certificates & docs printing and re-printing ("Duplicate should be mentioned on top of reprints) stockpile barcode scanning, Loads assignment to stockpiles & integration with ERP to update inventory.
Inventory	Both	Monitor products by stage	Field run almonds, Inshells and Kernels. Conventional & Organic. On hand inventory views.
Movement	Mobile / Tablet	Move inventory from one location to another	Movement of stockpile loads to Pre-clean staging, Moving any inventory from one location to another, making corrections
Shipment	Both	Ship the kernels and inshells from facility in bins and trailers	Truck check-in, weight capture, picklist generation, Bin & LP scanning, truck check-out
~~**Locations**~~	~~Both~~	~~AgriWMS Locations~~	~~Stockpiles, Tanks, Shipment Staging, Planned Staging~~

Scanner	Both	Scanning	Stockpile scanning, Bin & serial label scanning and trailer licence scanning
Reports	Web	Generate reports	Incoming loads, Stockpile Inventory, Planned for Production Inventory, Production Duration, Reporting by grower, field, variety etc.
Profile	Both	Manage user preferences	Language, Security (Password & Pin), Preferences, Sign-out
Settings	Web	Manage application settings	Master Data Management, User Management, Label Designing, Bulk Upload

2. **Detailed Features List:**

The following spreadsheet contains features and sub-features list. Navigate to the sub-sheet “App Areas” and filter on App Name = WMS and WMS-Mobile / Tablet to refer to AgriWMS features list.

Features Spreadsheet Link: VB P3 YHS Apps Feature List

Formula Calculations:

Receiving:

- Net Weight = Gross Weight (from scale) - Tare Weight (from scale)
- Difference b/w Tare = Tare Weight (from scale) - Sum of Truck & Trailer Tare from DB.

Shipment in Bins:

- Tare Weight = Bin Tare (from production)
- Net Weight = Gross Weight (from scale) - Tare Weight

~~Shipment in Trailers (Truck comes with Trailer):~~

- ~~Net Weight = Gross Weight (from scale) - Tare Weight (from scale)~~

Shipment in Trailers (Truck comes without Trailer):

- Net Weight = Gross Weight (from scale) - Tare Weight (from production)

Integrations & System Fields

1. **API: Agri WMS APIs**
2. **Fields: AgriWMS (Processor) - Fields & Mappings**

Validation Rules, Error Handling & Notifications

Following spreadsheet contains validation rules, errors & notifications:

AgriWMS | Errors, Validations, Notifications

1. The sub-sheet “Errors” contains the errors handling
2. The sub-sheet “Validations & Alerts” contains validations and alerts. Ones that do not block users will be alerts or prompts.

Setup / Settings & Login Functionality

A Settings menu will be added to the WMS application, providing access to administrators for master data configuration and user management. The Settings module will include the following areas:

1. User Management

- Create and manage application users
- Assign and manage user roles and permissions
- Activate or deactivate users as required

Please refer to the following spreadsheet for permission matrix.

YHS - Permission Matrix

2. Master Data Management

The Settings module will allow creation and maintenance of core master data mentioned in the “List of Master Data” section

3.Login Criteria

The sign-in screen of apps will only include a scanning of card option and an option of 4 digit pin to sign in. No email ID and password log in required.

Use Cases

Following is the spreadsheet containing the use cases. Refer Use Cases and filter on App to filter out WMS use cases.

Use Cases Sheet: Use Cases

Future Considerations

- Dashboards
- Stockpile to Pre Cleaning movement planning
- Dried / empty Bins Inventory
- Receiving, production and shipment of rejects by handlers
- Hulls and shells shipment
- Billing info for growers will also populate from the shipment quantities
- Batch inventory reporting for growers and handlers to plan their future activities.

- QC App integration compatibility during receiving and shipment stage location in future.
- Instructions will be added at every task screen
- Inventory onhand by the “as of date” report view.
- Locations creation and modifications

Updates (Version 1.1):

Inventory Module

The Inventory module provides a centralized view of all inventory managed in the system. It allows users to search, filter, and review on hand inventory records based on product type, grower, field, variety, and processing status. It allows users to hide/show columns (saves it for future as user preference), allows refresh action, selection of rows and pagination of the grid.

The screen will include **three tabs** (All, Field Run Almonds and Processed Almonds) and **three sub tabs** under the **Processed Almonds tab** (Cleaned Almonds, Inshells and Kernels) to organize inventory based on the processing stage.

Primary Inventory Tabs

The inventory module will contain the following top-level tabs:

1. **All:**

Displays all inventory records regardless of product type or processing stage.

This tab aggregates:

- Field Run Almonds
- Processed Almonds
- Handler Rejects
- Production Rejects

This view is useful for:

- Global inventory search
- Cross-stage reporting
- Operational monitoring

2. **Field Run Almonds:**

Displays only the inventory (field run almonds) that has been received from the grower and has not yet been processed. This is the filtered view of the “All” inventory.

3. **Processed Almonds**

This tab contains three sub-tabs representing processed product categories i.e. Cleaned Almonds, Inshells and Kernels.

4. **Handler Rejects**

Displays only the inventory (handler rejects) that has been received from the handler and has not yet been processed. This is the filtered view of the “All” inventory.

Secondary Tabs Under Processed Almonds

1. **Clean Almonds**

Represents almonds that have completed the cleaning stage but have not yet been further processed.

Typical characteristics:

- Debris and foreign material removed
- Ready for shelling or further processing
- Stored as clean field-run inventory

2. **Inshell**

Represents almonds that are stored or traded with the shell intact.

These almonds are:

- Shipped as an inshell product to handlers
- These are usually loaded in trailers and stay at shipment staging locations before delivery.
- However, they are also packaged in bins.

Inventory in this tab represents finished inshell product lots.

3. **Kernels**

Represents almonds that have been fully shelled and processed.

These kernel products are:

- Shipped as an kernels to handlers
- Usually packaged in bins.

This is generally considered the final processed inventory stage.

4. **Production Rejects**

Represents almonds that are production rejects such as Hash, evo etc.

Inventory Module - Grid

Each tab displays inventory records in a tabular grid where each row represents an inventory batch or stockpile.

Following will be the typical fields on the main grid include:

Field Name	Description
Container ID	Field Run Ticket, Tank Ticket, Trailer LP, Bin LP (Handler Bin ID)
Inventory ID	Bin Tag (Bin ID), Bulk / Trailer LP
Receiving Date	Date of receiving on stockpile
Grower	Grower or farm associated with the inventory
Field	Orchard block where the almonds were harvested
Variety	Almond variety (Nonpareil, Carmel, Butte, etc.)
Crop Year	Harvest year
Total Net Weight	Total recorded weight of the stockpile
Fumigation Status	Processing or treatment status (e.g., Fumigation status)
Location Type	Type of location where the lot is stored such as Stockpile, Tank etc.
Location	Specific location where the lot is stored such as Stockpile A01.
Farming Type	Conventional or Organic, etc.. - Source Field Ticket
Crop Year	Numeric/year field. - Source Field Ticket
Production Run#	Run# (where applicable)

Apart from above, specific quality attributes created on the quality app will become the fields of this grid.

Inventory Search

The screen includes a global search bar allowing users to locate inventory records quickly.

Search will support:

- Stockpile Number
- Tank Ticket ID
- Grower Name
- Field
- Variety
- Run#

Search results will update the grid based on the active tab context.

Inventory Filters Panel

Filters will be available in a side panel which will be expandable or collapsable. All the filters will be grouped within their respective category. Following are the categories of the filters:

- Production Options
    - Field Run, Inshell & Kernel (checkbox)
    - Source Information: Grower, Field, Field Ticket
- Variety
    - All varieties in the system (multi selection checkbox)
- Location
    - Location Types, Location
- Additional Filters
    - Farming Type, Crop Year, Date Range
- Quality Attributes
    - Specific quality attributes created in the quality application (integration with QC will be required to achieve this)

Users apply filters using Apply Filters and can reset using Clear All.

Please refer to the following spreadsheet for more detailed information grid filters.
YHS - WMS - Main Screen, Grid or Cards and Filters

Locations Module

The Locations module provides a centralized interface to manage physical storage and staging areas within the facility. The system organizes locations into location types and specific locations within those types.

Location Type vs Location

- Location Type → Category of storage or staging area (e.g., Stockpile, Tank, Staging Pre-Clean, Staging Shipment).
- Location → Individual physical storage unit within a location type (e.g., Stockpile A01, Tank 1, Pre-Clean Staging A).

Each location can hold inventory loads and tracks metadata such as grower, variety, weight, and fumigation status.

Locations Main Screen

This screen provides an overview of all storage location types available in the facility (Stockpile, Tanks, Precleaning Staging & Shipment Staging).

The main screen includes following:

1. **Location Summary**

A summary section at the top provides high-level metrics:

Metric	Description
Total Locations	Total number of defined storage locations in the system
Total Capacity (lbs)	Aggregate capacity across all location types

2. **Location Type Cards**

Each card represents a Location Type.

Examples:

- Stockpile
- Tanks
- Staging Pre-Clean
- Staging Shipment
- Production

Each card displays:

Field	Description
Location Type	Category of storage location (e.g., stockpile)
Number of Locations	Total locations under that type

Clicking a card navigates the user to the **location type detail screen**.

Stockpile Locations - Main Screen

Stockpiles represent open yard storage locations used to store field-run almonds before processing.

1. **Screen Features**

Users can view locations in two modes:

- Card View
- Map View

2. Stockpile Summary Metrics

Metric	Description
Total	Total stockpile locations
Open	Locations currently active (has inventory)
Closed	Locations not accepting inventory
On Hold	Being fumigated and in fumigation movement restriction period
Empty	Locations without inventory
Fumigated	Locations where fumigation is completed
Not Fumigated	Locations requiring fumigation
Total Weight	Total lbs stored across all stockpiles

3. Location Grid Structure

Locations are organized hierarchically:

Zone
→ Row
→ Location

Example:

Zone 1
Row A
A01
A02
A03

Each **location card** represents a physical stockpile.

4. Location Card Information

Each card displays the following:

Field	Description
Location ID	Unique identifier (e.g., A01)
Grower	Associated grower for the stockpile

Field	Associated field for the stockpile
Variety	Almond variety stored
Total Net Weight	Current weight stored in location
Status	Active / On Hold / Closed / Empty
Fumigation Status	Yes / No

Cards are color-coded to represent status. (please refer design / prototype)

Stockpile Location Details Panel

Selecting a location opens a side panel with detailed information.

Following tabs are available:

- Overview
- Load History
- Fumigation

1. Overview Tab - Location Information

Displays general information about the selected stockpile location. This tab includes following fields:

Field	**Description**
Zone	Storage zone
Row	Row identifier
Location	Location ID
Total Loads	Number of loads currently stored
Stockpile Status	Active / On Hold / Closed / Empty
Fumigation Status	Whether fumigation is completed
GPS Coordinates	Optional coordinates (long, lat)for mapping

2. **Overview Tab - Location QR Code**

Each stockpile location has a dedicated unique QR code. Following fields are included in the Location QR code section

Field	Description
QR Code Value	Encoded identifier for the location

Note: Users can print location labels.

3. **Loads Tab**

Displays all loads currently stored in the stockpile. Each load record includes:

Field	**Description**
Ticket Number	Unique load identifier
Date/Time	Arrival timestamp
Grower	Grower of the load
Field	Field on which the almond grew
Variety	Almond variety
Handler	Processing handler
Carrier	Transport company
Driver	Driver name
Truck	Truck LP
Trailer	Front Trailer LP, Back Trailer LP
Gross Weight	Weight before tare
Tare	Truck tare weight
Net Weight	Final load weight

A summary section below displays:

Field	**Description**
Total Loads	Number of loads in the location

Total Weight	Combined weight of all loads

4. **Fumigation Tab**

Tracks fumigation activity for the stockpile. It displays the following information. (integration with QC required for this)

Field	**Description**
Completion Date	Date/time fumigation completed
Restriction Period	Period till when movement can't be done
Material	Chemical used
Technician	Person performing fumigation

Tanks Locations

Tanks represent storage locations used to store cleaned almonds. This screen contains summary metrics, tank cards and color coding to indicate tank status or variety in the tank.

1. **Metrics displayed:**

Metric	**Description**
Total Tanks	Total number of tank locations
Active Tanks	Tanks currently in production
Empty Tanks	Tanks without inventory
Total Field Run	Total weight stored in tanks

2. **Tank Cards**

Each tank card represents an individual tank. All tanks will be color coded. The variety color coding will be used to represent the variety each tank contains.

Following information is displayed in the tank cards:

Field	Description
Tank Name	Unique tank identifier
Run Number	Processing run currently assigned
Grower	Source grower
Field	Origin field
Variety	Almond variety
Weight	Current weight stored
Handler	Facility responsible for handling

Tank statuses chips will appear on the tank cards with different colors.

Color	Status
Grey	Empty
Green	In Use (In Production)
Brown	Closed (Filled with other GFV)
Blue	Closed (Filled with same GFV as Production)

Pre-Clean Staging - Main Screen

Figma Link: https://www.figma.com/design/5fTlpmFQKzgVS5DPxPv19W/AgriERP-Master-File?node-id=28015-9896&t=LQqprFDM0SMjc8GB-4

Pre-clean staging locations represent temporary holding areas before almonds enter the cleaning process.

1. **Pre-Clean Staging Summary**

Metric	Description
Number of Loads	Total loads currently staged
Total Lbs	Total weight across staging areas

2. **Preclean Staging Main Grid**

There will be a main grid showing the preclean staging locations, users will be able to hide / show columns (user preference based save)

Field	Description
Location	Staging location
# of Loads	Number of loads staged
Total Weight	Total weight of the tickets in staging
Average Load	Average Load of total tickets (Total Weight / # of Loads)

Pre-Clean Staging - Details Panel

Selecting a staging location opens a side panel.

1. **Header Information:**

Field	Description
Location ID	Staging location identifier

2. **Summary Metrics**

Field	Description
Loads	Number of loads in staging
Total Lbs	Total weight
Avg Load	Average weight per load

3. **Load Details**

Each load record includes:

Field	Description
Ticket Number	Field Ticket#
Arrival Date/Time	Movement Datetime
Grower	Grower associated with the ticket
Field	Field associated with the ticket

Variety	Variety associated with the ticket
Handler	Handler associated with the ticket
Gross	Gross weight of the ticket
Tare	Tare weight of the ticket
Net	Net weight of the ticket

Shipment Staging Location - Main Screen

Shipment staging areas represent outbound staging locations where processed almonds are prepared for shipment.

1. **Shipment Staging Summary:**

Metric	Description
Total Bins	Total bins staged for shipment
Total Kernels Weight	Total Kernels weight staged for shipment (sum of all kernels net weight)
Total Bulk Loads	Total trailers staged for shipment
Total Bulk Loads Weight	Total bulk / trailer weight staged for shipment (sum of all bulk / trailer net weight)

2. **Shipment Staging Main Grid**

There will be a main grid showing the shipment staging locations, users will be able to hide / show columns (user preference based save)

Field	Description
Location	Staging location ID
Number of Runs	Processing run identifier
Bin Count	Kernel / Inshell
Trailer Count	Storage container type
Total Bin Weight	Grower
Average Bin Weight	Origin field

Total Bulk Weight	Almond variety
Average Bulk Weight	Total weight

Shipment Staging Location - Details Panel

Selecting a staging location opens a side panel.

1. **Header Information:**

Field	Description
Location ID	Staging location identifier

2. **Summary Metrics**

Field	Description
Bins	Number of bins in staging
Bulk	Number of trailers in staging
Total Bin Weight	Total weight of bins in staging
Total Bulk Weight	Total weight of bulk in staging

3. **Inventory Details**

There will be two tabs i.e. Bins and Bulk.

- Each bin inventory record includes:

Field	Description
Bin Container ID	Unique bin identifier
Bin Tag	Bin tag produced during production
Production Run#	Associated production run#
Grower	Grower associated with the ticket
Field	Field associated with the ticket
Variety	Variety associated with the ticket

Handler	Handler associated with the ticket
Gross	Gross weight of the ticket
Tare	Tare weight of the ticket
Net	Net weight of the ticket

- Each bulk inventory record will include

Field	Description
Trailer LP	Unique trailer identifier
Bulk Load Tag	Bulk load tag produced during production
Production Run#	Associated production run#
Grower	Grower associated with the ticket
Field	Field associated with the ticket
Variety	Variety associated with the ticket
Handler	Handler associated with the ticket
Gross	Gross weight of the ticket
Tare	Tare weight of the ticket
Net	Net weight of the ticket

Updates (Version 1.2):

Receiving Module (Mobile/Tablet)

Receiving Main Screen - Mobile / Tablet

This screen allows users to validate assigned field tickets by reviewing grower, field, variety, and stockpile details. Users can quickly confirm and validate loads, ensuring accurate stockpile assignment and readiness for downstream processing.

Field Name	Description	Example / Values
Search Tickets	Allows users to search assigned tickets using ticket number or related details.	Search input
Pending Validation Count	Displays the number of tickets awaiting validation.	7 Pending Validation
Ticket Number	Displays the unique field ticket identifier.	5797-9900
Ticket Status	Indicates the current status of the ticket.	Assigned
Grower	Displays the grower associated with the ticket.	Valley Orchards
Field	Displays the field from which the almonds were harvested.	501
Variety	Displays the almond variety for the ticket.	Winters
Driver	Displays the driver responsible for the load.	test wms
Trailer Plate	Displays the trailer license plate number.	9R99R
Assigned Stockpile	Displays the stockpile location assigned to the ticket.	SP-stockpile-sp-a07
Stockpile Barcode	Displays the scannable barcode for the assigned stockpile.	Barcode image
View Details	Allows users to open a detailed view of the selected ticket.	Button
Validate	Allows users to validate the ticket after confirming stockpile and load details.	Button
Ticket Card	Represents a grouped view of ticket-level information for validation.	UI Card
Scroll / List View	Allows users to browse multiple tickets in a vertical list.	Scrollable list

Receiving Field Ticket Details Screen - Mobile / Tablet

This screen allows users to validate a specific field ticket by confirming load details and verifying the assigned stockpile location through barcode scanning. It ensures that incoming

loads are correctly directed to the designated stockpile, maintaining accuracy and traceability in the receiving process.

Field Name	Description	Example / Values
Ticket Number	Displays the unique identifier of the field ticket being validated.	0011-2026
Ticket Status	Indicates the current status of the ticket.	Assigned
Grower	Displays the grower associated with the load.	Northstate Orchards
Variety	Displays the almond variety for the load.	Peerless
Field	Displays the originating field of the almonds.	801
Driver	Displays the driver responsible for the load.	Daniel Anderson
Expected Stockpile Location	Displays the stockpile assigned to the ticket for unloading.	Assigned
Stockpile Barcode	Displays the barcode representing the assigned stockpile location.	SP-A06
Load Number	Indicates the sequence number of the load.	1
Trailer Count	Displays the number of trailers associated with the load.	1
Front Trailer	Displays the license plate of the front trailer.	FTL-011
Front Trailer	Displays the license plate of the back trailer.	FTL-012
Carrier	Displays the carrier responsible for transportation (if available).	N/A
Gross Weight	Displays the total gross weight of the load.	39,801 lbs
Validate Stockpile	Allows the user to confirm and validate the stockpile after scanning/verification.	Button
Back to Field Validation	Navigates back to the list of tickets pending validation.	Button

Receiving Stockpile Scanning Screen - Mobile / Tablet

This screen enables users to validate the assigned stockpile by scanning its barcode or manually entering the stockpile number. It ensures accurate matching between the ticket and physical stockpile location before confirming delivery.

Field Name	Description	Example / Values
Close Button	Allows the user to exit the scan screen and return to the previous screen.	“X” icon

Delete / Remove Button	Allows the user to remove or cancel the current validation process.	Trash icon
Expected Stockpile Location	Displays the stockpile location assigned to the ticket.	A06
Stockpile Barcode Display	Shows the barcode corresponding to the assigned stockpile location.	SP-A06
Barcode Scanner Frame	Displays the scanning area where users align the barcode for scanning.	Camera frame UI
Camera Status Message	Displays system messages related to camera availability or scanning status.	Camera unavailable
Scan Instruction Text	Guides the user to align the barcode within the scanner frame.	Align Barcode to Scan
Manual Entry Field	Allows users to manually enter the stockpile number if scanning is unavailable.	Enter Stockpile Number
Go Button	Submits the manually entered stockpile number for validation.	GO

Handling of Handler Rejects

Receiving of Rejects

1. **Harvest Ticket Creation for Rejects**
    a. The handler rejects would be identified when the user selects the product type from the dropdown.
    b. The system would preselect GFV and will disable it for the user input.
2. **Virtual Stockpile Assignment for Rejects**
    a. Upon “Validate and Assign” the system will automatically assign it to the predefined stockpile i.e. Virtual Stockpile.
3. **Field Validation for Rejects**
    a. The Mobile / Tablet users will validate the receiving like they do for field run almonds.

Movement to Preclean Staging & Following Processes

1. **Movement of Rejects to Preclean Staging:**
    a. Similar to field run almonds, stockpile tickets of rejects will be scanned and the system would move them to preclean staging.
2. **Virtual Tanks for Rejects:**
    a. There would be virtual tanks for rejects. On precleaning job, when the stockpile ticket scanned by the system contains handler Rejects as product type then the system would auto select this virtual tank.
3. **Following Processes - Production**

a. The process will be the same as field run almonds except that the product type here will be changed. Input for the product will be handler rejects instead of field run almonds.
b. The output will be inshells or kernels.

Bulk Production (Trailer) Weighing

Figma Link: https://www.figma.com/design/5fTlpmFQKzgVS5DPxPv19W/AgriERP-Master-File?node-id=30900-20089&t=IUYWqJ7R1KXnlaWG-4

This feature is integrated with the AgriProduction application. This allows the users to capture the trailer gross weight after they are filled from the production floor.

All the awaiting weight and completed trailers will appear in the Bulk Production Weighing grid. However if the production run is completed then these would be removed / hidden from the grid.

Bulk Production (Trailer) Weighing Process

1. **AgriProduction: Awaiting Weight Trailers**
   a. After the trailers are filled in AgriProduction they go in “Awaiting Weight” state. Such trailers will be synced to AgriWMS Bulk Production Weighing screen.
2. **AgirWMS: Capture Weight**
   a. From the list of trailers, the user will select the trailer. They can use search or filters here. Weighing scale widget will appear after selection.
   b. The user captures the weight on the system and saves it.
3. **AgriWMS: Weight Tag Printing**
   a. The system will automatically generate the weight certificate as soon as gross weight is captured.
   b. Users can also generate weight certificates from the grid for trailers that are previously weighed.

Bulk Production Weight Main Screen

This screen allows users to manage and track trailers associated with production runs by monitoring tare, gross, and net weights. It supports filtering, searching, and scanning of license plates to efficiently handle trailer-level inventory tracking and weight capture during operations.

Field Name	Description	Example / Values
Scan License Plate	Allows users to scan a trailer license plate for quick identification.	Button
Search	Enables keyword-based search across trailer records. Search by Trailer LP, Production Run#, GFV allowed	Search input

Trailer LP	Displays the unique license plate number of the trailer.	8MG7214
Production Run#	Displays the production run associated with the trailer.	PR-10234
Grower	Displays the grower associated with the almonds in the trailer.	Smith Farms
Field	Indicates the field from which the almonds originated.	Field A
Variety	This will indicate the variety of almonds	Nonpareil, butte
Tare Weight	Represents the weight of the empty trailer before loading.	2,120 lbs
Gross Weight	Displays the total weight of the trailer including the load.	15,200 lbs
Net Weight	Represents the actual weight of almonds after subtracting tare weight from gross weight.	13,080 lbs
Status	Indicates the current processing stage of the trailer weight capture.	Awaiting Gross
Actions - Void	This marks the trailer as void (will be reflected on AgriProd also). Removes the record from this table. Only allowed on “Awaiting Weight trailers”. There will be a prompt whenever this function is triggered asking user to confirm.	Void icon
Actions - Print	Prints duplicate inventory tag. Only allowed on completed / weighed trailers	Print icon

Bulk Production Weight Capture Screen

This screen provides detailed information about a selected trailer and allows users to capture tare weight using an integrated scale or manual entry. It ensures accurate weight recording and supports the trailer weighing process within production and logistics operations.

Field Name	**Section**	**Description**	**Example / Values**
Trailer LP	Header	Displays the license plate number of the selected trailer.	8MG7214
Production Run#	Trailer Details	Displays the production run associated with the trailer.	PR-10234
Status	Trailer Details	Indicates the current stage of the trailer in the weighing process.	Awaiting Gross
Grower	Product Details	Displays the grower associated with the almonds in the trailer.	Smith Farms

Field	Product Details	Indicates the field from which the almonds originated.	Field A
Variety	Product Details	Displays the almond variety contained in the trailer.	Chardonnay
Scale Status	Scale Widget	Displays the current connection and stability status of the weighing scale.	Scale Stable
Disconnect Scale	Scale Widget	Allows the user to disconnect the weighing scale from the system.	Button
Weight Reading	Scale Widget	Displays the real-time weight captured from the scale.	25,863 lbs
Capture Gross Weight	Scale Widget	Captures and records the tare weight from the connected scale.	Button
Manual Weight Entry	Scale Widget	Allows users to manually input tare weight if scale capture is not used.	Input Field
Save		Saves the gross weight and then auto prints the weight certificate	Button
Close		Closes the screen after reviewing or capturing weight.	Button

Bulk Production Main Grid Filters

1. **Quick Filters**

On top will be quick filters of trailer statuses i.e. All, Awaiting Gross & Completed

2. **In-Column Filters**

There will be filters on following columns:

- Trailer LP
- Production Run#
- Grower
- Field
- Variety

Bulk Production Allowed Weight Validation

There will be a predefined allowed limit (for instance 80,000 Lbs), if the gross weight exceeds this number then the system will not allow it to capture the gross weight.

Empty Bin Handling

Figma Link: https://www.figma.com/design/5fTIpmFQKzgVS5DPxPv19W/AgriERP-Master-File?node-id=30970-19675&t=IUYWqJ7R1KXnlaWG-4

The process begins when the empty bins are handed over to the WMS app. A separate window in the app is dedicated to managing these bins, allowing the user to receive the empty bins sent by the handlers. In this window, the user has two key options:

1. **Receive Empty Bins**: The user can receive the bins that are being sent by the handlers. Each bin will be listed with handler-specific data for easy identification.

2. **Send Filled Bins**: Filled bins can be sent back to the handler using this functionality.

This window will display bin data organized handler wise, giving the user full visibility into how many bins were received and sent and what the current balance for each handler, ensuring efficient tracking and management of bins. This setup supports streamlined operations, ensuring that both incoming empty bins and those in use are accurately recorded and managed in the system.

Empty Bins Handling Main Screen

This screen allows users to manage and track empty bins across different handlers by monitoring received, sent, and available balances. It also provides functionality to adjust bin quantities, ensuring accurate inventory control of reusable containers.

Field Name	Description	Example / Values
Handler Filter	Allows users to filter bin records based on the handler (source entity).	All Handlers, Anderson Farms
Date Filter	Allows users to filter records based on a selected date.	Date selector
Handler	Displays the name of the handler associated with the bins.	Anderson Farms
Received	Indicates the total number of empty bins received from the handler.	40, 60, 80
Sent	Displays the number of bins sent out to operations or other locations.	20
Balance	Shows the remaining number of empty bins available with the handler.	20, 40, 60
Last Activity	Displays the date when the last bin transaction occurred.	28/01/26
Pagination	Allows users to navigate through multiple pages of bin records.	1–10 of 20

Empty Bins Handling Details Screen

Following fields will be available on details side panel:

Field Name	Description	Example / Values
Handler	Displays the name of the handler associated with the bins.	Anderson Farms
Received	Indicates the total number of empty bins received from the handler.	40, 60, 80
Sent	Displays the number of bins sent out to operations or other locations.	20
Balance	Shows the remaining number of empty bins available with the handler.	20, 40, 60
Quantity	Input field allowing users to specify the number of bins (whole number only) to be processed (add/remove). +ve & -ve is allowed	Numeric input (both +ve & -ve allowed)
Save	This button will save the quantity added by the user	UI Action / Button
Cancel	This button will cancel the current operation	UI Action/ Button

Receiving Module (Web)

Receiving Main Screen - Web

This screen provides a centralized view of all incoming harvest loads, allowing users to track tickets, monitor weights, assign stockpiles, and manage receiving operations efficiently while maintaining full traceability of grower, field, and variety data.

1. **Searching**

There is a search bar above the list that supports following:

- Ticket No#
- Date
- Grower
- Field
- Variety
- Assigned Stockpile
- Status

2. **Quick Filters**

There is a status dropdown as a quick filter that contains all the statuses.

3. **Filters**

There is a filter icon that opens filters side panel. Following will be following filters:

- Status
- Product Type
- Grower

- Field
- Variety
- Assigned Stockpile
- Date From
- Date To

There will be following actions on the filters side panel
- Apply button.
- Close Icon

4. **Column Options**

On top of the list, there will be an option of “Column Option” using which the user will be able to hide or show columns and sort the columns. The system will save the table view as user preference.

5. **Create Field Ticket**

On top will be a button to Create a new Field Ticket. The system will navigate the user to the creation form.

6. **Receiving List - Grid View**
    a. **Grid Columns**

Field Name	Description	Example / Values
Ticket #	Represents the unique identifier of the field run ticket.	9884-6993
Product Type	Represents the Product Type received	Field Run Almonds, Rejects
Date	Displays the date when the harvest load was received or recorded.	2026-03-26
Load #	Indicates the load sequence or number associated with the ticket.	1, 3
Grower	Displays the grower associated with the incoming almonds.	Vann Family Tree LLC
Field	Indicates the field from which the almonds were harvested.	1001, 102
Variety	Displays the almond variety of the load.	Nonpareil, Winters
Handler	Displays the associated handler of the load.	California Handlers
Gross Weight	Represents the total weight of the received load before deductions.	40,000 lbs
Tare Weight	Represents the weight of the empty truck & trailer.	10,000 lbs
Net Weight	Represents the final usable weight after adjustments.	30,000 lbs
Assigned Stockpile	Displays the stockpile location where the load is stored.	stockpile-sp-a16
Farming Type	Represents Farming Type	Conventional, Organic

Crop Year	Represents the crop year of harvest	CY-2026
Carrier	Represents the company that delivered the harvest load	Valley Transporation
Driver	Represents the driver that delivered the harvest load	David
Truck LP	Represents the truck that delivered the harvest load	LP-001
Front Trailer LP	Represents the front trailer LP of the harvest load	FT-001
Back Trailer LP	Represents the back trailer LP of the harvest load	BT-001
Single Load	Represents that only a single trailer is supposed to be received.	Yes, No
Split Load	Represents that front and back trailers contain different GFVs.	Yes, No
Last Load	Represents last load of GFV	Yes, No
Status	Indicates the current stage of the ticket in the receiving process.	Assigned, Planned, Field Validated

b. Actions and Other Details

Following will be the actions and other details on the grid.

- Actions: There will be an option of print which will print the stockpile ticket and weight certificate.
- Pagination: There will be pagination such as “Page 1 of 3” and rows per page dropdown where users will be able to select the number of rows system displays.

7. Receiving List - Card View

Receiving Field Ticket Creation Screen - Web

This screen enables users to create a digital field ticket by capturing grower, field, variety, load weights, and transportation details. It ensures accurate recording of incoming harvest loads and supports traceability from field to processing.

Field Name	**Description**	**Example / Values**
Ticket Number	Displays the system-generated unique identifier for the field ticket.	5413-9825
Ticket Date	Displays the date when the ticket is created.	03/26/2026
Grower Name	Allows users to select the grower associated with the load. This field is mandatory.	Select Grower

Field	Allows users to select the field from which the almonds were harvested.	Select Field
Handler	Identifies the handler or entity responsible for processing the load.	Select Handler
Crop Year	Auto picks the crop year based on dates and allows user to change it using dropdown values	CY2026
Variety Selection	Allows users to select the almond variety for the load. This field is mandatory.	Nonpareil, Fritz, Butte
Total Trailers	Displays or captures the number of trailers associated with the load.	0, 1, 2
Product Type	Specifies the type of product being received.	Field Run Almonds, Rejects
Farming Type	Specifies the type of farming	Organic, Conventional
Gross Weight (lbs)	Captures the total weight of the load including the container. This field is mandatory.	43,086 lbs
Tare Weight (lbs)	Captures the weight of the empty truck/trailer.	26,222 lbs
Last Load	Indicates whether the current load is the final load for the ticket.	Toggle (On/Off)
Split Load	Indicates whether the load is split across multiple deliveries.	Toggle (On/Off)
Single Load	Indicates whether only one trailer contains field run almonds that is supposed to be received	Toggle (On/Off)
Driver Name	Captures the name of the driver transporting the load. This field is mandatory.	Jose Castillo
Truck License #	Captures the license plate of the truck. This field is mandatory.	9H1050
Front Trailer License #	Captures the license plate of the front trailer.	9RX8969
Back Trailer License #	Captures the license plate of the back trailer.	9RX8962
Comments	Allows users to enter additional notes related to the load.	Free text
Attachments	Allows users to upload supporting documents such as images or PDFs.	File upload
Cancel	Closes the screen without saving the ticket.	Button
Reset	Clears all entered values on the form.	Button
Save Ticket	Saves and creates the field ticket in the system.	Button

Receiving Details Screen - Web

This screen provides a complete view of a harvest load, including ticket details, trailer-level data, real-time weight capture, and stockpile assignment. It enables users to validate loads, capture accurate weights using integrated scales, and maintain full traceability from receiving through storage and processing.

1. **Header / General Information**

Field Name	Description	Example / Values
Ticket Number	Displays the unique field ticket identifier along with the barcode.	5797-9900
Grower, FIeld, Variety & Product Type	Displays grower, field, variety, and product type for the selected load.	Valley Orchards – 101 - Winters (Field Run Almonds)
Status	Indicates the current processing state of the load.	Assigned, Awaiting Validation
Assigned Stockpile	Displays the stockpile location assigned to the load.	A07
Load Sequence	Indicates the sequence number of the load in the series.	#1
Load Type	Identifies whether the load is first, last, or part of a series.	First Load
Harvest Series	Displays grouping of loads based on grower, field, and variety.	Valley Orchards – 501 (Winters)
Variety Tag	Displays the almond variety associated with the load.	Winters
Product Type	Displays the product category of the load.	Field Run Almonds
Farming Type	Displays the farming type of the load.	Conventional, Organic
Crop Year	Displays the crop year of the load ticket.	CY2026
Total Trailers	Displays the number of trailers associated with the load.	2

2. **Weighing Station Section**

Field Name	Description	Example / Values
Scale Status	Indicates whether the weighing scale is connected and active.	Ground Scale Connected
Live Scale Reading	Displays real-time weight captured from the scale.	26,805 lbs
Gross Weight	Displays total weight including load and container.	22,722 lbs
Captured Tare Weight	Displays weight of empty trailer/container captured by user.	2,000 lbs
Trailer Tare Weight	Displays weight of empty trailer/container recorded in system DB	1,500 lbs

Net Weight	Displays actual product weight (Gross – Captured Tare Weight).	20,722 lbs
Capture Gross	Captures the gross weight from the scale. Is visible when ticket is in Planned state	Button
Capture Tare	Captures the tare weight from the scale. Is visible when the validation has been completed on the ticket	Button
Read Scale	Refreshes or reads the current scale value.	Button
Auto	Enables automatic weight capture from the scale.	Toggle/Button

3. **Transportation Information Section**

Field Name	Description	Example / Values
Carrier	Displays the carrier responsible for transport.	N/A
Driver Name	Displays the driver handling the load.	test wms
Truck #	Displays truck identifier or license number.	9H99h
Front Trailer Plate	Displays front trailer license plate.	9R99R
Rear Trailer Plate	Displays rear trailer license plate.	9R99RR

4. **Attachments**

There will be two actions in attachments section:

1. Attachments made will appear here for download
2. Upload new attachments.

5. **Certificates and Labels Section**

Field Name	Description	Example / Values
Assigned Stockpile	Displays the stockpile where the load is stored.	A07
View & Print Certificates	Allows users to print all certificates at once.	Button
Weight Certificate	prints weight certificate for the load this will be enabled only after tare weight is captured	Button
Stockpile Label	prints the stockpile label.	Button

Receiving Validate & Stockpile Assignment Screen - Web

This screen allows users to assign a stockpile location to incoming harvest loads by selecting from recommended or available locations. The system highlights the most suitable stockpile based on grower, field, and variety matching while also providing capacity and utilization details to support efficient storage decisions.

1. **Header**

The header contains following:

- Harvest Ticket#
- Grower, Field, Variety

2. **Search**

The search supports following

- Stockpile #
- Grower
- Field
- Variety

3. **Locations List**

The locations list will appear as cards. Only the eligible locations under location type “stockpile” will appear. The stockpile eligible would be the one having the same GFV or empty. The users will be able to select any stockpile from the list they want.

There are two types of locations in the list, one that has the same GFV “Recommended Stockpile” and the other that are empty "Available Stockpile Locations”. The system will make “Recommended Location” by using different color coding and labels.

Field Name	Section	Description	Example / Values
Recommended Location Label	Recommended	Highlights the system-recommended stockpile location based on matching criteria.	Recommended
Stockpile Code	Recommended	Displays the identifier of the stockpile location.	A16
Location Area	Recommended	Indicates the physical zone or section of the stockpile.	North
Recommendation Note	Recommended	Provides context for why the location is recommended (e.g., previous loads).	Active stockpile with 13 previous loads
Grower	Recommended	Displays the grower associated with the stockpile.	Anderson Farms
Field	Recommended	Displays the field linked to the stockpile.	102
Variety	Recommended	Displays the almond variety stored in the stockpile.	Nonpareil
Assigned Loads	Recommended	Indicates the number of loads already assigned to the stockpile.	13
Total Weight	Recommended	Displays the total weight currently stored in the stockpile.	889,137 lbs
Select Recommended	Recommended	Allows users to select the recommended stockpile location.	Button
Available Stockpiles	Available Stockpiles	Displays a list of alternative stockpile locations available for	A18, A19, A20

		selection.	
Available Stockpile Code	Available Stockpiles	Displays identifier for each available stockpile.	A18
Grower	Available Stockpiles	Displays grower assigned to the stockpile (if any).	N/A
Field	Available Stockpiles	Displays field associated with the stockpile (if any).	N/A
Variety	Available Stockpiles	Displays variety stored in the stockpile (if any).	N/A
Select		Allows user to select an alternative stockpile location.	Button
Close		Closes the stockpile selection screen.	Icon (X)

Inventory Movement - Mobile/Tablet

This screen is used for inventory movement operations within the warehouse. It allows users to move perform general movements by scanning bins, trailers, or stockpile tickets. The process is scan-driven, ensuring quick and accurate movement tracking by first identifying the source (bin/trailer/ticket) and then the destination location.

Movement Main Screen

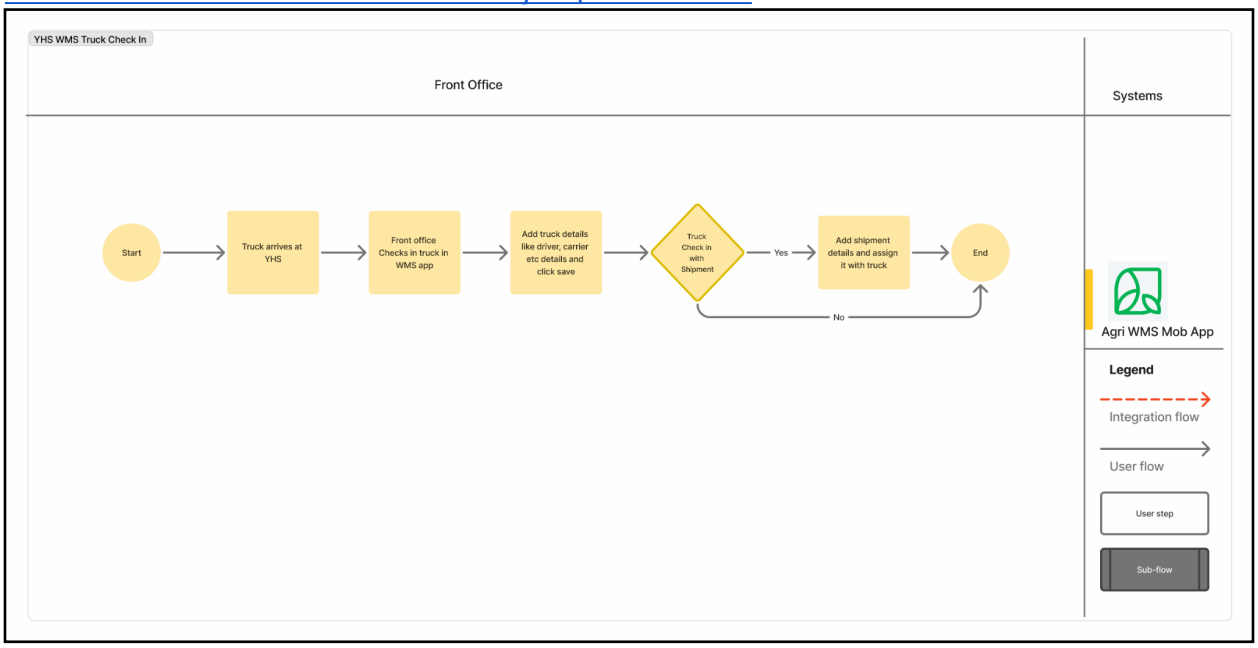

There will be one card for making movements in mobile from where user can make movements using scanning or manual entry. Following will be the details.

Field Name	**Description**
Movements	Section header for general inventory movement operations.
Step 1: Scan Bin/Trailer LP/Tickets/Stockpile ticket	Instruction to scan source entity such as bin, trailer license plate, or stockpile ticket.
QR Code Scan Area	Scan input area to capture QR/barcode of bin, trailer, or ticket.
Step 2: Scan Location	Instruction to scan the destination location for the movement.
Scan Location Instruction	Helper text guiding user to scan a bin/location to proceed.

Truck Check In & Check Out

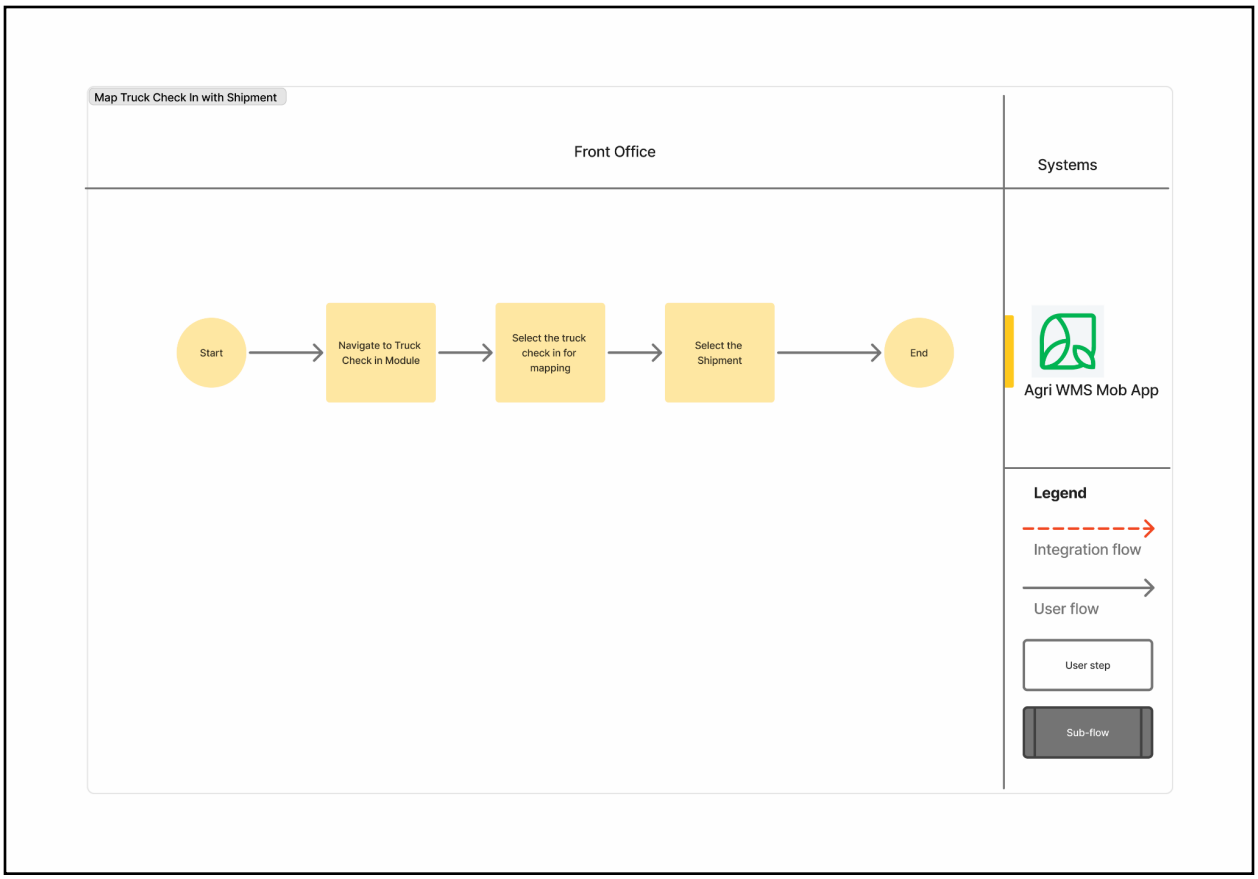

Truck Check In Process Flow

Figma Link: https://www.figma.com/board/uLk10wVnQDFNkncF6TDcI1/Vann-Phase3-Internal?node-id=11578-17836&t=40fc2j1HqW0GQY95-4

Mapping Shipment with Truck Process Flow

Figma Link: https://www.figma.com/board/uLk10wVnQDFNkncF6TDcI1/Vann-Phase3-Internal?node-id=11578-26617&t=40fc2j1HqW0GQY95-4

Front Desk Officer User Journey:

User:

Sarah: Front Desk Officer | Agri WMS Web Application

Truck Check In

Sarah | Front Desk Officer

1. Sarah logs in on WMS web and navigates to the Truck check in screen when a truck driver comes to YHS premises to pick shipment.
2. She clicks on New Check In, then add Truck & Driver info
3. Decision: Check in with Shipment?
    a. Yes: Fill truck information such as carrier, driver, truck, trailer, capture weight and click save.
    b. No:
        i. Fill truck information such as carrier, driver, truck, trailer, capture weight and click Next.
        ii. Select shipment from list that shows all unassigned shipments

* Note: Truck information fields are dropdown-based, with mandatory fields clearly identified.

Mapping Shipment with Truck

Sarah | Front Desk Officer

1. Sarah logs in on WMS web and navigates to the Truck check in screen.
2. She clicks on mapping button against a truck
3. She selects shipment and saves the form.

* Note: Truck information fields are dropdown-based, with mandatory fields clearly identified.

Truck Check In Main Screen

This side panel provides a centralized view of all truck check-in records, enabling users to search, filter, categorize, and manage incoming trucks efficiently.

1. **Tabs**

These tabs allow users to categorize and view check-in records based on assignment status.

- All
- Assigned
- Unassigned

2. **Search**

Allows users to search check-in records using keywords such as Check-In ID, driver, or license plate. The search bar supports following:

- Carrier Name
- Driver Name
- Truck LP
- Trailer LP
- Status

3. **Filters**
    a. **Quick Filters:** For statuses: All, Assigned, Unassigned
    b. **Filter Icon Button:** Opens additional filtering options for carrier, driver, truck & trailer LP.

4. **Action Button**
    a. **New Check-In:** Allows users to create a new truck check-in record by opening the creation form.

5. **Main Grid / Table**
    a. **Fields & actions**

Field Name	Description
Check-In ID	Unique identifier assigned to each truck check-in record.
Shipment ID	Unique identifier assigned to each shipment record.
Status	Displays the current status of truck check-in.
Driver	Name of the driver associated with the truck.
Truck LP	License plate number of the truck.
Front Trailer LP	License plate number of the front trailer.
Back Trailer LP	License plate number of the back trailer (if applicable).
Actions	1. Link icon: This will open select shipment screen for mapping 2. De link Icon: This will unassign the truck from the associated shipment. 3. Void: This will remove the truck check in from the grid 4. Truck Check Out: This will allow the user to assign the shipment with truck check in.

b. Pagination

i. Page Indicator

Displays current page and total records.

Example: *Page 1 of 4 | 1–10 of 30*

ii. Previous Button

Navigates to the previous page.

iii. Next Button

Navigates to the next page.

Truck Check In Create Screen

Field Name	Section	Description	Example / Values
Check-In Type		Allows users to select whether the truck check-in is linked to a shipment or created independently.	Without Shipment, With Shipment
Carrier Name		Captures the name of the carrier responsible for transporting the load. This field is mandatory.	David
Driver Name		Captures the name of the driver operating the truck. This field is mandatory.	David
Truck License #		Represents the license plate number of the	A-001

		truck used for transportation. This field is mandatory.	
Front Trailer Plate		Captures the license plate number of the front trailer attached to the truck.	ABC-001
Back Trailer Plate		Captures the license plate number of the back trailer attached to the truck. This field is mandatory.	DEF-002
Scale Status	Weighing Scale Widget	Displays the current status of the weighing scale connection.	Scale Stable
Tare Weight (Scale Reading)	Weighing Scale Widget	Displays the real-time weight reading captured from the connected weighing scale.	25,863 lbs
Disconnect Scale	Weighing Scale Widget	Allows the user to disconnect the weighing scale from the system.	Button
Capture Tare Weight	Weighing Scale Widget	Captures and records the tare weight from the scale into the system.	Button
Manual Tare Weight Entry	Weighing Scale Widget	Allows users to manually input tare weight if scale integration is unavailable or not used.	Input Field
Cancel		Closes the check-in creation screen without saving any data.	Button
Next		Proceeds to the Select Shipment screen after required details are entered. Only appears if check in is with shipment	Button
Save		Saves the form and updates the shipment status	Button

Truck Check In Shipment Association Screen

This side panel allows users to select and associate an existing shipment with a truck check-in. It displays key shipment details such as grower, carrier, destination, and net weight, ensuring accurate linkage between incoming trucks and shipment records. This appears when check in is with shipment or when clicking on mapping of truck with shipment button.

The shipments will be listed in this side panel as cards. Each card will have a radio button for selection and the following fields

Field Name	**Description**	**Example / Values**
Check In Type	Allows users to select whether the truck check-in is linked to a shipment or created independently.	With Shipment, Without Shipment
Shipment ID	Represents the system-generated identifier for the shipment.	27035

Destination	Shows Destination from shipment	Colusa
No. of Manifests	Displays the grower associated with the shipment. On hover, shows Manifest IDs	3
Packaging Type	Packaging type from picklist .	Bin or Bulk
No. of Bins or Trailers	Displays the number bin or trailers. On hover shows IDs	2
Net Weight	Displays the total net weight of the shipment.	30,782 lbs
Cancel	Closes the shipment selection screen without saving any changes.	Button
Save	Confirms the selected shipment and associates it with the truck check-in.	Button

Truck Check Out Create Screen

Truck check out will be an action on the truck check in main screen grid which will open a side panel. This screen allows users to create and select an existing shipment with a truck check-in. It displays key shipment details such as grower, carrier, destination, and net weight, ensuring accurate linkage between outgoing trucks and shipment records. This appears when check out is with shipment or when clicking on mapping of truck with shipment button.

Field Name	**Section**	**Description**	**Example / Values**
Carrier Name		Captures the name of the carrier responsible for transporting the load. This field is mandatory. This will be disabled for user input	David
Driver Name		Captures the name of the driver operating the truck. This field is mandatory. This will be disabled for user input	David
Truck License #		Represents the license plate number of the truck used for transportation. This field is mandatory. This will be disabled for user input	A-001
Front Trailer Plate		Captures the license plate number of the front trailer attached to the truck. This will be disabled for user input	ABC-001
Back Trailer Plate		Captures the license plate number of the back trailer attached to the truck. This field is mandatory. This will be disabled for user input	DEF-002

Scale Status	Weighing Scale Widget	Displays the current status of the weighing scale connection.	Scale Stable
Gross Weight (Scale Reading)	Weighing Scale Widget	Displays the real-time weight reading captured from the connected weighing scale.	25,863 lbs
Disconnect Scale	Weighing Scale Widget	Allows the user to disconnect the weighing scale from the system.	Button
Capture Gross Weight	Weighing Scale Widget	Captures and records the gross weight from the scale into the system.	Button
Manual Gross Weight Entry	Weighing Scale Widget	Allows users to manually input gross weight if scale integration is unavailable or not used.	Input Field
Cancel		Closes the check-in creation screen without saving any data.	Button
Next		Proceeds to the Select Shipment screen after required details are entered. Only appears if check in is with shipment	Button
Save		Saves the form, updates the shipment status and prints the weight certificate and shipping manifest	Button

Shipment Manifest

Upon shipment creation, the system would automatically generate unique manifest IDs to the inventory that has the same grower, field and variety in a single crop year.

For example if a shipment is created with bins of Grower A, Field 1, Butte and Grower B, Field 2, Padre then the system would generate two manifest IDs, one for first GFV bins and the other for the second GFV bins. Manifest IDs will always be unique.

- For a single production run, multiple manifests can be created as a single production run inventory can be delivered in multiple shipments.
- One shipment can have multiple manifests created as multiple grower, field and variety can be delivered in a single shipment.

Shipment Module (Web)

Shipment Main Screen - Web

This screen provides a centralized view of all outbound shipments, allowing users to track shipment status across different stages such as planning, loading, and completion. It enables quick filtering, monitoring, and management of shipment operations through a card-based interface.

1. **Shipment Screen Actions**

Field Name	Description	Example / Values
Search Shipments	Allows users to search shipments using manifest#, shipmen#, product type, packaging type	Search shipments…
Status Tabs	Filters shipments based on lifecycle stage.	All, Planned, Assigned, Truck Checked-In, Loading, Loading Complete, Ready for Completion, Completed
Create Shipment Button	Allows users to create a new shipment record.	+ Create Shipment
View Toggle	Allows switching between list and grid/card view.	List / Grid icons
Column Options	Allows show/hide and sorting of columns	Action

2. **Shipment Card/List Field Details**

Field Name	Description	Example / Values
Manifest ID	Unique identifier assigned to the manifest.	MAN-20260325-607
Shipment ID	Internal reference number for the shipment.	SHP-30891
Product Type	Displays the type of product being shipped.	Kernel, Inshell
Packaging Type	Displays the type of packaging being shipped.	Bin, Trailer
Handler	Displays the associated handler.	VFO, Blue Diamond etc.
Grower	Displays the grower associated with the shipment.	Anderson Farms
Field	Displays the associated field	3, 4, 5
Variety	Displays the associated variety	Non pareil, Butte etc.
Carrier	Displays the transport company responsible for the shipment.	Blue Line Trucking
Driver	Displays the driver responsible for the shipment.	John
Truck LP	Displays the truck responsible for the shipment.	TRK001

Front Trailer LP	Displays the front trailer# responsible for the shipment. Only applicable for bulk / trailer	LP001
Back Trailer LP	Displays the back trailer# responsible for the shipment. Only applicable for bulk / trailer	LP002
Bin Count	Displays number of bins	2 Bins
Weight	Displays total shipment weight.	2000 lbs
Created	Displays the shipment created date associated with the shipment.	3/16/2026
Status Badge	Displays the current stage of the shipment lifecycle.	Truck Checked-In, Completed, Loading Complete

Shipment Creation Screen - Web

This screen captures all essential shipment details including customer, product, and transport information. It serves as the foundation for shipment creation and drives downstream processes such as inventory allocation and loading.

1. **Customer & Destination**

Field Name	Description	Example / Values
Customer Name	Captures the name of the customer receiving the shipment.	Jane
Destination	Specifies the destination company or facility.	Mariani Nut Company
Destination Address	Allows entry of full delivery address (optional).	Enter full address

2. **Carrier & Transport**

Field Name	Description	Example / Values
Carrier	Transport company responsible for shipment delivery.	Pacific Freight
Driver Name	Driver assigned to shipment (optional).	John Smith
Staging Location	Dock/staging area where shipment will be prepared.	Dock A
Scheduled Date	Planned shipment date.	03/26/2026
Packing type	This will allow user to select packing type used for	Bins, Trailers

	shipment	

3. **Additional Notes & Actions**

Field Name	Description
Notes	Additional instructions or comments.
Cancel	Exit without saving.
Next	Move to Step 2: Pick Inventory.

Pick Inventory

This screen allows users to select inventory (bins) for shipment based on filters such as grower, variety, and location. Users can select individual or multiple bins, ensuring that only relevant inventory is allocated to the shipment.

1. **Filtering & Selection Controls**

Field Name	Description	Example / Values
Search Bar	Allows users to search inventory using bin ID, location, or grower.	Search bins, locations…
Variety Filter	Filters available inventory by almond variety.	All Varieties
Container/ Bin ID Filter	Filters available inventory by Container/Bin IDs.	BIN-0001
Packaging Type Filter	Filters available inventory by packaging type.	Bins/Trailers
Locations Filter	Filters available inventory by Locations.	Shipment staging, Production etc.
Production Run Filter	Filters available inventory by Production run number.	Run 321
Grower Filter	Filters inventory by grower.	All Growers
Apply Filter	A button which will search the inventory based on selected filter criteria.	UI Action Button
Select All Visible	Selects all bins currently visible in the filtered list.	Action link
Available Count	Displays total number of bins available for selection.	108 bins available
Product Type	This will allow the user to select the product type.	Kernels, Inshells, Rejects.

2. **Inventory Grid**

Field Name	Description	Example / Values
Bin ID	Unique identifier assigned to each bin.	BIN-K-023
Location	Displays the current staging or warehouse location of the bin.	Planned Staging E
Variety	Indicates the almond variety contained in the bin.	Mission, Sweetheart
Grower	Displays the grower associated with the bin inventory.	Onpareil Farms
Net Weight	Shows the available weight of almonds in the bin.	40,143 lbs
Selection Indicator	Allows users to select one or multiple bins for shipment.	Row highlight / checkbox

3. **Actions**

Action	Description
Back	Returns to Step 1: Shipment Info.
Cancel	Cancels the shipment creation process.
Next	Proceeds to Step 3: Review & Create.

Review & Create

This screen provides a final review of shipment details and selected inventory before creation. It ensures accuracy by summarizing customer, transport, and inventory data, and confirms readiness to generate the shipment and associated pick list.

1. **Shipment Summary**

Field Name	Description	Example / Values
Customer	Displays the selected customer for the shipment.	jane
Destination	Displays the selected destination location.	destination-3
Carrier	Displays the assigned carrier for transportation.	carrier-3
Scheduled Date	Displays the planned shipment date.	2026-03-26

2. **Pick List Summary**

Field Name	Description	Example / Values
Pick List Count	Displays total number of bins selected for shipment.	1 Bin
Total Weight	Displays total weight of selected inventory.	40,143 lbs

3. **Pick List Grid**

Field Name	Description	Example / Values
Sequence (#)	Displays the sequence number of the selected bin.	1
Bin ID	Unique identifier of the selected bin.	BIN-K-023
Location	Displays the current location of the bin.	Planned Staging E
Variety	Indicates the almond variety in the bin.	Mission
Grower	Displays the grower associated with the bin.	Onpareil Farms
Net Weight	Displays the weight of the selected bin.	40,143 lbs
Total Row	Displays aggregated total weight of all selected bins.	40,143 lbs
Action	Unload: This will allow the user to unload bins from the shipment. (this will change the status of bins and the shipment as well).	UI Action/ Icon

4. **System Message**

Field Name	Description
Ready to Create Shipment	Confirms that shipment is valid and ready for creation.
Pick List Note	Indicates that a pick list will be generated for warehouse execution.

5. **Actions**

Action	Description
Back	Returns to Step 2 for modifying inventory selection.
Cancel	Cancels the shipment creation process.
Create Shipment	Finalizes and creates the shipment record in the system.

Shipment Details Screen - Web

This screen provides a complete view of shipment execution, including loading progress, bin-level tracking, weight capture, and transport details. It enables real-time monitoring of shipment status and ensures accurate loading and traceability before shipment completion.

1. **Header Information**

Field Name	Description	Example / Values

Shipment ID	Unique identifier for the shipment.	SHP-70385
Manifest ID	Reference number for shipment manifest.	MAN-20260310-526
Grower Reference	Displays associated grower for shipment.	Anderson Farms
Status Badge	Displays current shipment stage.	Loading Complete
Print Button	Allows printing of shipment documents.	Print

2. Shipment Progress Tracker

Stage	Description
Planned	Shipment created but not assigned.
Assigned	Inventory allocated to shipment.
Truck Checked-In	Truck arrival recorded.
Loading	Loading process started.
Loading Complete	All bins loaded successfully.
Ready for Completion	Shipment ready for finalization.
Completed	Shipment fully processed and closed.

3. Weighing Station

Field Name	Description	Example / Values
Scale Status	Displays connection status of weighing scale.	Ground Scale Connected
Live Scale Reading	Displays real-time weight captured from scale.	23,470 lbs
Gross Weight	Total weight including container.	-
Tare Weight	Weight of empty container.	-
Net Weight	Actual product weight after tare deduction.	Calculated

4. Bin Pick List

Field Name	Description	Example / Values
Bin ID	Identifier of the bin loaded into shipment.	BIN-K-015
Location	Source location of bin.	Planned Staging C
Variety	Almond variety in the bin.	Carmel
Net Weight	Weight of bin contents.	39,035 lbs
Status	Indicates validation/loading status of bin.	Validated
Scanned By	User who scanned/validated the bin.	Mike
Total Weight	Total weight of all loaded bins.	39,035 lbs

Action	1. Unload: A button to unload bins from the pick list. 2. Unassign: A button to un assign bins from the pick list.	UI Action/Button

5. **Shipping Information**

Field Name	Description	Example / Values
Shipment ID	Unique shipment identifier.	SHP-70385
Manifest ID	Manifest reference for shipment.	MAN-20260310-526
Product	Type of product being shipped.	Kernel
Variety	Almond variety associated with shipment.	Nonpareil
Destination	Delivery location for shipment.	Blue Diamond Growers
Staging Location	Dock or staging area used for loading.	Dock A

6. **Grower Information**

Field Name	Description	Example / Values
Grower Name	Name of the grower associated with shipment.	Anderson Farms
Field	Field reference (if applicable).	N/A
County	County associated with grower.	N/A
Practice	Farming practice classification.	Conventional

7. **Transport Information**

Field Name	Description	Example / Values
Carrier	Transport company handling shipment.	Valley Transport
Driver	Driver assigned to shipment.	Joseph
Truck Number	Truck identifier.	Not checked in
Tare Weight	Recorded tare weight of vehicle.	Not captured
Front Trailer	Front trailer plate number.	-
Rear Trailer	Rear trailer plate number.	-

8. **General/Timeline Information**

Field Name	Description	Example / Values
Created Date	Date when shipment was created.	3/10/2026

Updated Date	Last update timestamp.	3/10/2026
Activity Timeline	Displays chronological shipment events.	Loading Started / Completed

Shipment Module (Mobile/Tablet)

Shipment Main Screen - Mobile / Tablet

This screen displays key details of shipments, including Shipment ID, Grower, Product, Carrier, Truck, Driver, Total Bins, and Total Weight. The Status field tracks the shipment's progress, such as whether the truck is checked in or the load has been completed. It provides an overview of shipments for tracking, management, and validation.

Field	Description
Shipment ID	A unique identifier assigned to each shipment.
Grower	Displays the grower associated with the almonds in the shipment. Example: "Bannister Farms."
Product	Shows the type of product being shipped, such as "Inshell."
Carrier	Displays the name of the transport carrier responsible for delivering the shipment. Example: "Blue Line Trucking."
Truck	Displays the truck number associated with the shipment. Example: "tre123."
Driver	Shows the name of the driver responsible for transporting the shipment. Example: "TBD" (to be determined).
Total Bins	Indicates the total number of bins included in the shipment. Example: "1 Bin" or "2 Bins."
Total Weight	Displays the total weight of the shipment. Example: "39,208 lbs" or "75,358 lbs."
Status	Shows the current status of the shipment. Example statuses include "Truck Checked-In" and "Loading Complete."

Shipment Verification Screen - Mobile / Tablet

This screen represents the shipment verification process within the system. It is used to monitor and manage incoming shipments and their corresponding load tickets. The user can view details about which bins are assigned to shipment which needs verification, and details of the bins such as net weight and gross weight. The main actions available on the screen include scanning the bins for validation, and completing the loading process.

Field Name	Description	Example
Truck Check-In ID	A unique identifier for the truck check-in record.	C-001, C-002
Driver	The name of the driver associated with the current truck check-in.	David, John
Truck LP (License Plate)	The license plate number of the truck for identification.	12, 13
Front Trailer LP (License Plate)	The license plate number of the front trailer attached to the truck.	123, 456
Back Trailer LP (License Plate)	The license plate number of the back trailer attached to the truck.	234, 567
Bins	The bins associated with the truck check-in, showing their statuses (awaiting, validated, etc.).	BIN-K-016, BIN-K-019
Net Weight	The actual weight of the almonds in the bin after tare weight is subtracted.	32,720 lbs, 42,638 lbs
Gross Weight	The total weight of the almonds and the bin (tare weight is not subtracted).	36,352 lbs, 45,229 lbs
Status of Bins	The current status of the bins, whether they are awaiting, validated, etc.	Awaiting, Validated
Scan Bin	A button to scan bins for validation during the truck check-in process.	-
Complete Loading	A button that allows the user to mark the loading process as completed once all bins have been validated.	-

Shipment Scanning Screen - Mobile / Tablet

The screen shown is for scanning the barcode of bins related to a shipment in the AgriWMS system. The user can either scan the barcode directly using the integrated scanner or manually input the bins number or barcode information in the provided text field. The system is designed to recognize various formats for the barcode, such as "6708-XXXX," "SP-A01," "SH-XXXX," and others, facilitating an efficient validation. Once the barcode is scanned or entered, the user can proceed with the next steps in the shipment validation process.

Field Name	Description
Barcode	The barcode field where the user either scans a barcode or manually enters a barcode number.
Barcode Scan Indicator	An area with a camera-like interface where users align the barcode for scanning.
Stockpile Number	A field to enter or scan the stockpile number if the barcode scanning

	function is unavailable.
Go Button	A button to trigger the action after entering or scanning the barcode (submit the data).

Bins Handler ID

Bin Handler ID Main Screen

This screen is part of the master data / configuration module in AgriWMS (Web App) used by management or front-office users to manage and monitor Handler Bin IDs. These bins are used in outbound shipment processes to handlers, ensuring traceability of inventory at the bin level.

Field Name	**Description**
Handler Bin IDs	Page title indicating listing of all bins assigned for handler operations.
Search	Allows users to search bins using Bin ID or related attributes.
All Statuses	Dropdown filter to filter bins based on status (e.g., Empty, Completed).
Date Filter	Allows filtering records based on date (e.g., creation or last activity date).
View Toggle (Grid/List)	Switch between different visual layouts (list view or card/grid view).
Create Label	Allows the user to create a new label for bins.
Filter Icon	Opens advanced filtering options for refining data.
Column Selector	Allows users to customize visible columns in the table.
Handler Bin ID	Unique identifier assigned to each bin.
Handler	Name of the handler associated with the bin.
Status	Current state of the bin (e.g., Empty, Completed).
Action (Print)	Allows printing of bin labels or related documents.
Pagination Info	Displays current page and total records (e.g., Page 1 of 4, 1–10 of 30).
